

Support for advisor who meets BARF.

So what to do? Arm yourself with serenity, because:

You want to change a BARFER?

You want to inform him that there is something BETTER?

You can test your patience and charity on's uttermost.

Keep very calm and positive at rejection.

Because most BARFER are militant.

You can only try by finding all the similarities,

that you feel your full respect for BARFERS.

And have been well perceived as the best.

In reality, you can find out best where the problems
the BARFers are:

- 1) The difficult, slimy, "fragrant" preparation.
- 2) possible health problems, risk of infection, parasites risk
- 3) difficult to get fresh ingredients, most rely on frozen products

No BARFER has fresh all 14 ingredients at hand every day,
from a reliable source...

will he / she be hardly migrate.

remain friendly as Andrea made her sister
and ONCE they have a problem: offer solution!

Confrontation, with explanation that BARF is a crap,
is exactly wrong. Even just saying "PANEON is better"
because 1-3, he / she will not WANT to accept.

Most likely is still working towards that PANEON
is at least „nearly“ equivalent, because 1-3

Our procedure:

We say BARF is EQUIVALENT if

- * Daily fresh ingredients, no freezing
- * Absolutely reliable, safe source, no parasites risk etc.
- * So rich blend as PANEON menus
- * Detoxification and joint support like PANEON menus

except (where PANEON definitely helps better in case):

- * very young animals that get even better regurgitated "pre-digested" natural food.
- * animals that are contaminated by chemical feed and the intestinal tract is already ill.
- * older animals whose digestive is no longer able to bear the raw food.
