

Success Story: „old, lazy, overweight, coarse-haired, fusspot“

„Negri“ 8 jears (rescued from street 7 jears ago)

What I saw was incredible!!

She's even more beautiful than ever!

Her eyes were sparkling, her coat was shiny and soft!

she had lost weight

she was leaping about like the happiest dog in the world!

a bundle of unprecedented energy and silky fur

my 8 year old, lazy, slightly overweight, coarse-haired, fusspot baby...

**.... transformed into a leaner, keener, silkier version
of the girl I rescued from the streets almost 7 years ago**

to me, every tin is worth gold!

Liebe Andrea,
so, der erste Bericht ist da - Hund Negri :)))

This is the story of my dog Negri

I recently spent 2 months in Australia, visiting my parents.

As usual, I left my dog Negri with Anja, as I have done for a number of years, sometimes for over a month at a time. I do this because I know I can go away and have peace of mind that my dog is in safe hands and will be completely looked after. Very important to me!

So I returned from my trip without a care in the world, safe in the knowledge that I would be reunited with my dog exactly as I left her.

I was wrong!!!

What I saw was incredible!! Her eyes were sparkling, her coat was shiny and soft (she's always been coarse haired!), she had lost weight and she was leaping about like the happiest dog in the world! I knew it wasn't just because she was pleased to see me.

To be honest, I thought she'd have forgotten about me after 2 months! No! It was a vitality and energy that I'd never before seen in her! So where did it come from???

Anja informed me that she had been trying out some new food she had sourced from Austria, as she so believes in healthy eating. She told me how natural it is and how excited the animals get at feeding time.

I was intrigued.

Could this new food really have caused such a transformation!? I had my dog for 7 years and I believed I was giving her good food, my dog is my life. I had to find out, so I continued.

Here we are a month later, and I can tell you that my previously lazy, coarse haired dog, is still a bundle of unprecedented energy and silky fur. She used to loose so much hair, and it was always a bit greasy and smelly - all gone!

She's even more beautiful than ever! What's more, a once fussy eater now devours her bowl in seconds. No messing about, straight in!

In short, my 8 year old, lazy, slightly overweight, coarse-haired, fusspot baby, is transformed into a leaner, keener, silkier version of the girl I rescued from the streets almost 7 years ago.... just by eating this food!! To me, every tin is worth gold! I am very thankful, as I just love her to death.

Comment PANEON (please do not mind our english):

It's quite normal, that dogs get all this problems with bad smell, loss of hair, loss of energy, looking coarse-haired and so on. This is no wonder if You consider all the ridiculous stuff that is allowed to make dogfood from.

If there is declared 100% „meat and side products“, that can be 90% bones, fur, feathers, claws, hooves and so on. Even more, even this side products are often the minor ingredients, while the main ingredients are „cereals and vegetable side products“.

This leads into a lack of nutrients. Lack of nutrients causes loss of energy and in further stages also loss of quality of body-tissue that leads to weak bones, joints and heart.

The other misery is the contamination with lots of chemical supplements. There are even dangerous additives that have been banned for human food. This is why, intolerances and allergies are a common problem for our pets, even worse than for human population.

The dangerous thing about it: It often takes 4-8 years for the effects to occur. So it is difficult to prove, which product or ingredient really was the cause. Finally it was "scientifically" tested that these chemical additives for color, odor, strength, preservative, antioxidant do not harm (...or what!).

At least they do not harm seriously, at least not over the few months trial period, at least if they are applied at young and healthy dogs. After all the tested additive has just been tested as single substance and not as a cocktail of many. Their interactions and rollups are mostly unexplored.

What is even more dangerous: incompatibilities are the pre-symptoms of allergies that can precede auto-immune diseases, later followed by tumors that lead finally to cancer. Cancer is the leading cause of death for dogs and cats in many places.

The good message: Not all dogs and cats „buy“ the illusion. The effort by all means for cheating dogs and their owners making them believe they've got a high quality product: color, odor, flavorings, binders and attractants. Negri proves her cleverness by showing you, that she does not like this stuff.

It did not happen "by chance", that Negri met PANEON: She was sure hoping for a better "hunting season" of her alpha-mate Steven (in the belief system of dogs, her owner is the "leader of the pack" and shares the hunting prey).

Nevertheless every brave and faithful dog deserves natural food without chemical add ons.

What's happening to a dog's body without daily renewal of contamination?

It can detoxify! The detoxification was additionally supported by the detoxifying mineral, the activated silicates that are in all PANEON menus for dogs and cats. It is the same detox-mineral we offer for humans in the PANEON Vitality System.

It is always the most important measure to stop the causes.

The typical improvements usually occur when the body tissue is replaced after about three months to 90%. Negri's success was apparently already after two months. For humans, the same process takes but a year. This is why a sick person is called "patient". This is the price for our relatively long life compared to dogs.

Final word:

Natural health is the natural state of our body.

If natural food is digested into the body, it can not help but to be healthy.
If we assume a loving and stress free life. Or in short :

Poison out, vital substances in!
Stress out, pure joy in!

All the best for Negri and Steve!
